

SUPPLEMENTARY TABLE AND FIGURES LEGENDS

Figure S1-9. U2/U12-like Non-canonical splice junctions present at ETV1, IDH3B, ITPR1, NRK, C1orf63, POLR2E, RBFOX2 and TSPYL2 were validated by RT-PCR and Sanger sequencing. However, the U2/U12-like non-canonical splice junction present at CTNNB1 was not detected in the sequenced subclones. A) UCSC genome browser images show the identified non-canonical U2/U12-like splice junctions and the Sanger sequences that confirm their existence. B) RT-PCR of the non-canonical U2/U12-like splice junctions using 3 different RTs. The correspondence of RT-PCR products and expected isoforms are show to the right of each gel image, where § indicate that the isoform is not annotated in GENCODE v.17 and * indicate that the presence of the isoform was corroborated by Sanger sequencing.

Table S1. The primers used for RT-PCRs of the U2/U12-like and non-U2/U12 non-canonical splice junctions.

Table S2. Odd ratios and Pearson Chi-square P-values calculated of the differences of IE densities between the different regions of U2/U12-like non-canonical and canonical splice sites.

Table S3. Odd ratios and Pearson Chi-square P-values calculated of the differences of IE densities between the different regions of U2/U12-like non-canonical and alternative canonical splice sites.

Figure S10. A picture of UCSC genome browser shows the detection of the non-U2/U12 splice junction of XBP1 gene. Red letters highlight the 6-nt direct repeat associated to this splice junction. As non-canonical splice sites present in GENCODE and in our annotation are located in direct repeats, the two alignments are equivalent.

Figure S11-12. Non-U2/U12 splice junctions present at PSENEN and NAPA were tried to validate through RT-PCR and Sanger sequencing. A) Pictures of UCSC genome browser show the non-U2/U12 splice sites and the alignment of the Sanger sequences. B) RT-PCR of the non-U2/U12 splice junctions using 2 different RTs. C) Secondary RNA structures associated to the non-U2/12 splice junctions. Direct repeats are highlighted in red and orange.
