

Supplementary Data

SUPPLEMENTARY FIG. S1. Effect of G-CSF mobilization protocols on circulating stem and progenitor cells in peripheral blood of *Il2rg*^{-/-} mice. **(A)** The fold change in the absolute numbers of myeloid and stem cell marker-positive cells measured in peripheral blood after treatment with mobilization factor G-CSF compared with the numbers before mobilization. **(B)** The absolute numbers of c-Kit⁺, Sca-1⁺, and c-Kit⁺Sca-1⁺ cells after mobilization. Data contain the combined results of two experiments. G-CSF, granulocyte colony-stimulating factor.
