

Supplemental Material

Supplemental Figure

Supplemental Figure I. Net effect of combined TRPV4 and IK1/SK3 inhibition on ACh-induced Ca^{2+} dynamics at 25°C and 37°C. Arteries from wild-type mice were treated with the combination of HC-067047 (1 μM), charbdotoxin (0.1 μM) and apamin (0.5 μM) and stimulated with 2 μM ACh (n=5). There was no statistical difference between same-phase groups at 25°C and 37°C.
