

Figure S5. Bicalutamide upregulates the *RPL31* mRNA expression. BicR and LNCaP cells were treated with 10^{-6} M bicalutamide (Bic) for the indicated times. *RPL31* mRNA levels were analyzed by qRT-PCR, performed in triplicate. mRNA expression was normalized to *GAPDH* and shown as mean \pm s.d. ($n = 3$; **, $P < 0.01$).
