

A**B**

Supplementary Figure 4. Related to Figure 4. The expression level of N-cadherin at the cell surface of Pax6⁺, Tbr2⁺, and Tbr1⁺ cells after knockdown of miR369-3p, miR496 or miR543. Cells were stained for cell surface N-cadherin, followed by fixation, permeabilisation and staining for nuclear markers. (A) No shift in the intensity for N-cadherin at the cell surface is evidenced when each individual miRNA is knocked down. (B) Quantification of four independent experiments for the knockdown of individual miRNAs.
