

Figure U3

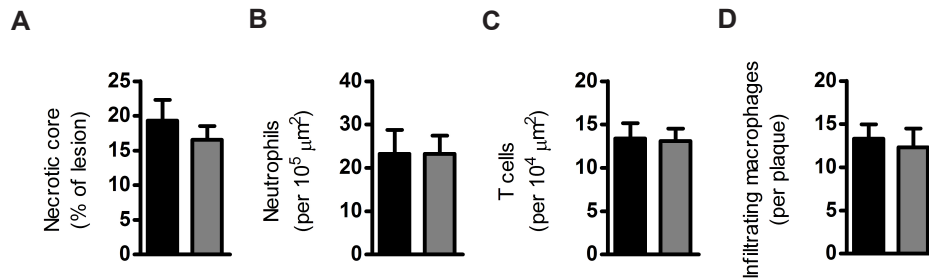

Figure U3. Myeloid Hdac3 deletion does not affect inflammatory cell infiltration in the atherosclerotic lesions

A. Necrotic core was calculated as a percentage of lesion area (n=10/10).

B. Neutrophils (NIMP1⁺ cells, n=19/18) were counted in the atherosclerotic lesions.

C. T cells (CD3⁺ cells, n=19/18) were counted in the atherosclerotic lesions.

D. Infiltrating macrophages (ERMP58⁺ cells, n=19/18) were counted in the atherosclerotic lesions. Unpaired t-test was performed for statistical analysis. Error bars indicate SEM.
