- (4) in terms of section 97(1)(c)(iii) of the Act, list in Appendix 4 the species or categories of alien species for which a permit from the receiving country is required before the species may be exported out of the country; and
- (5) in terms of section 97(1)(c)(iii) of the Act, list in Appendix 5 the species or categories of alien species for which there must be compulsory labelling before restricted activities may take place.

M VAN SCHALKWYK
Minister of Environmental Affairs and Tourism

Explanatory note:

The listing of alien species and listed species is done within the Framework for the Assessment and Management of Risk of Alien and Invasive species (Schedule 3 to the National Environmental Management: Biodiversity Act Regulations on Alien and Invasive Species). This requires a science-based approach to the listing process; regular updating of the lists, and scope to appeal against the listing of species or activities. The economic implications of a potential introduction may also be factored into the decision-making process. The lists that appear here are the initially assessed species. It is anticipated that it will take a further two years to have considered the most key species for possible listing, after which listing will take place on a regular basis, as the need arises. The lists will be reviewed following public comment. Further scope to comment will be made, as the lists are developed. Certain of the taxa lists are still being considered, and will be released at a later stage. This is indicated under the relevant taxa in the lists. Please note that the Author Names for species, and the common names for species in Afrikaans and African languages, will also be given in the final version of these lists.

Species Listed as Prohibited Alien Species

A list of species that are prohibited for introduction into South Africa is outlined below. These are species for which an assessment has been made that they have a high risk of causing significant negative impacts in the country, and that they are therefore prohibited from introduction. This list will be compiled over time by flagging taxa (species, genera or families) that are deemed to pose a high risk based on experience, both within South Africa, and within neighbouring countries and elsewhere in the world.

An applicant may, at his or her own cost, appeal against the listing of the species on the Prohibited Species list. This cost may be waived, should the appeal succeed.

Species Listed as Permitted Alien Species

The list of species that are permitted for introduction into South Africa is based on species that have already been introduced into South Africa and have been adjudged not to be invasive. This list will be compiled over time, to facilitate the ease of introduction of species with an acceptably low risk of becoming invasive.

Permitted Species are those that have been found or ascertained to have a negligible or no risk of invasion as a species, and which are therefore allowed to be brought into the country without having to undergo a Species Risk Assessment. The authorities will retain the right to require new genotypes (e.g. cultivars, varieties, genotypes) to undergo a Species Risk Assessment.

The approval to import a species into the country without any permit conditions may result in the species being put onto the list of Permitted Species.

The status as a Permitted Species does not absolve an importer from the requirements of a Vector Risk Assessment.

It will be possible to appeal against the presence of a species in the Permitted Species list, at the cost of the person or group lodging the appeal. This cost may be waived should the appeal succeed.

The following species are listed as Permitted Species:

Species Listed as Invasive Species

1. The species are listed alphabetically by scientific name for each of the following groupings:
 - 3.1 Mammals
 - 3.2 Birds
 - 3.3 Reptiles
 - 3.4 Amphibians
 - 3.5 Fishes (Fresh-Water)
 - 3.6 Fishes (Marine) and Other Marine Species
 - 3.7 Invertebrates (Fresh-water)
 - 3.7 Invertebrates (Terrestrial)
 - 3.9 Plants
 - 3.10 Microbes
2. The following categories of invasive species are provided for in terms of the Regulations:
Category 1a: Prohibited Invasive Species
Category 1b: Invasive Species Controlled by Programme
Category 2: Invasive Species Controlled by Area
Category 3: Invasive Species Controlled by Activity
Category 4: Extra-Limital Species
Category 5: Species Under Surveillance
3. The conditions set out in the Regulations, and in Schedule 3 to the Regulations, apply to the regulation of the species listed in these six categories.
4. Category 4 species are only considered invasive outside of the area deemed as part of the distribution range of a species indigenous to South Africa.
5. Category 5 species are potentially invasive species, or invasive species where the benefits of controlling them are to be weighed up against the costs of doing so.
6. The maps showing the deemed natural distribution ranges for the extra-limital species (Category 2) can be found in Schedule 3 to the Regulations.
7. The lists will be consolidated over the next two years, and updated on a regular basis.
