

Supplementary Figure. Plots of the $-\log_{10}(\text{p-values})$ for meta-analyzed SNP markers within and surrounding the top ranking genes A) *DMRT1*, B) *MAP3K1*, C) *ZFPM2*, D) *GATA4* and E) *IGF1R* belonging to the sex determination gene set. Dark blue dots represent meta-analyzed SNP markers. Individual results for each scan are shown for the most statistically significant markers in the region; a magenta diamond for the Penn scan, a yellow triangle for the UK scan, and a light blue square for the NCI scan.
