		All Species Combined	Blood										
										Figure 4 and Figure S4		KC244050- KC244109 AB507269- AB507373 KC733076- KC733164	Note that the "-" in the consensus sequence of other VLRC LRRV columns refer to the fact some internal LRRV modules contain 25 amino acids, compared to the majority that contain 24. Hagfish VLRC and lamprey VLRA do not contain any instances of LRRV with 25 amino acids, thus when comparing the entropies between lamprey and hagfish (Figure 4) or lamprey VLRC with lamprey VLRA (Figure S4) the column containing the gap was removed from analysis. As this group was only used for these analyses, it has not been included in the consensus column for LRRV.
