

## Supplementary Information

**Figure S1.** The cell viability of two gastric cancer cell lines, SNU-1 and NCI-N87 cells, were suppressed in a dose-dependently manner upon treatment with 13-AC. The SNU-1 and NCI-N87 cells were treated without or with the 13-AC at the final concentration between 2.5  $\mu\text{M}$  and 20  $\mu\text{M}$  for 24h. The cells were then harvested for the MTT assay as described in the Materials and Methods. Data shown here is representative of three independent experimental results.
