

Supplementary Data

SUPPLEMENTARY FIG. S1. Osteogenic and chondrogenic differentiation of ADSCs and fibroblasts. **(A)** ADSCs and fibroblasts cultures at passages P5 induced to differentiate into osteoblasts after 21 days. Cells were stained with Alizarin Red S. The bar indicates 200 μm . **(B)** ADSCs and fibroblasts micromass cultures at passages P5 induced to differentiate into chondroblasts after 21 days. Slides were stained with Toluidine blue. The scale bar indicates 50 μm . ADSCs, adipose-derived stromal cells.
