SUPPLEMENTARY FIG. S4. GO analyses for cellular component terms in ADSCs **(A)** and fibroblasts **(B)**. REVIGO visualization of the GO analyses with GOrilla is shown. The log10 of the *P* value of each GO after REVIGO analyses is plotted on the he x-axis, and the log 10 of the size of GOs is plotted on the y-axis. ADSC terms are relevant mainly to the plasma membrane and extracellular compartment. GO, gene ontology.
