

# Supplementary Figure 4

**Supplementary Figure 4:** Caspase inhibition abrogated cytotoxicity induced by BSO + L-PAM treatment in KMS-12-PE cell line. Percentage viability after treatment with BSO + L-PAM and BSO+L-PAM+QVD-OPh. QVD-OPh treatment reversed the cytotoxicity of BSO + L-PAM. The bars represent mean viability  $\pm$  SD ( $n \geq 3$ ) as determined by trypan blue exclusion assay.
