

Figure S1

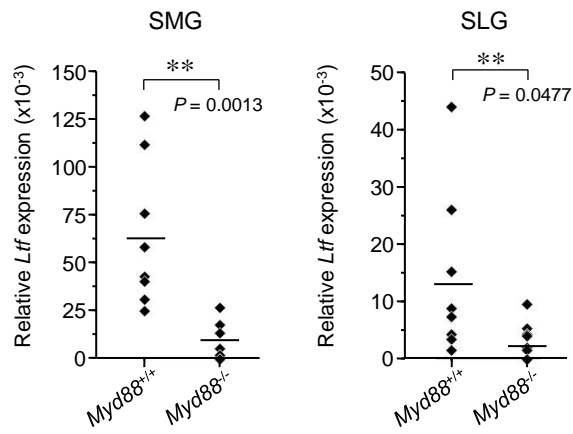

Figure S1. qRT-PCR analysis for *Ltf* expression in SGs.

Total RNA was prepared separately from SMGs and SLGs collected from *Myd88*^{+/+} mice and *Myd88*^{-/-} mice at 10 weeks old (n=8 each). Each expression level of *Ltf* was calculated relative to expression of the *Hprt1* housekeeping gene. Means of each group were shown and *P* values were calculated by unpaired Student's *t*-test. **, *P* < 0.01.
