

SUPPLEMENTARY FIG. S4. The effect of FVOs from 0% v/v to 54% v/v of the Ficolin mixture, PVP 360 kDa, and PVP 40 kDa on collagen IV deposition. * $p < 0.05$, ** $p < 0.01$ versus controls. Data are expressed as mean \pm SD, calculated from triplicates. Corresponding immunocytochemistry (ICC) images show collagen I deposition counterstained with DAPI for cell nuclei.
