

Figure S13

Figure S13. Expression and localization of Atg8 in sexual erythrocytic stages. Anti-Atg8 antibodies were used to detect PfAtg8 in the indicated gametocyte stages of *P. falciparum* by IFA as described in Materials and Methods section. The labels for indicated stages are as described in Figure 2, and all images indicate expression of Atg8, which appears to be associated with puncta throughout the parasite.
