

Supplement Figure S1 Legend

Figure S1. Zoom-in views of KSHV capsid around the penton with different contour levels. (A) Contour level is $0.5\bar{\delta}$ above the mean, $\bar{\delta}$ is the standard deviation; (B) Contour level is $2\bar{\delta}$. Note that the tegument densities are only visible at low contour level, suggesting low occupancy or high flexibility.

A
Cl=0.58

B
Cl=2.6
