

393

394 **Supplementary figure S2:** Decrease in adherence of RX1 strain of *Streptococcus pneumoniae* to
 395 A549 cells with treatment of 0.5 µg of anti-PhtD and anti-PcpA Fab. The mean adherence of
 396 RX1 on A549 cells was normalized to 100% and the % adherence of RX1 with anti-PhtD, PcpA
 397 and Ply Fabs is compared to RX1 alone. Data represent the mean with standard deviation of two
 398 experiments in triplicate. ** Symbols mean p value of <0.01.
