Supplemental Figure S5. Expression of genes involved in PLD-and PLD-DGK-pathways

(A) The expression of *PLD* genes involved in PLD-dependent PA production. Except *PLDβ2*, 11 of 12 *PLD* genes could be detected in the young seedlings.

(B) The expression of *PLC* genes involved in PLC-DGK-dependent PA production. Real-time PCR data were normalized to *ACT7*. The data came from three biological treatments. Values are means \pm SD (n=3 technical replicates).
