

Supplemental Figure S1. Radial phylogenetic tree based on an alignment of the β -amylase catalytic domains from all of the complete BAM sequences in nine Eudicot genomes: *Arabidopsis thaliana*, *Populus trichocarpa*, *Vitis vineifera*, *Ricinus communis*, *Fragaria vesca*, *Citrus sinensis*, *Cucumis sativus*, *Glycine max*, and *Solanum lycopersicum*. The variable N-terminal sequences were removed up to the first highly conserved residue; Val13 of Arabidopsis BAM5. Four subfamilies were identified by Fulton et al. (2008). Arabidopsis BAM1 through BAM9 are labeled with circled numbers.

Supplemental Figure S2. Effect of osmotic stress or cold stress on starch levels in leaves of 5-week old wild type, *bam5*, *bam5/1*, or *bam5/3* *Arabidopsis* plants. Leaves were harvested at the start of the photoperiod and stained with iodine after 2 or 4 days of treatment. A, Plants were treated with 200 mL of nutrient solution (control) or nutrient solution containing 200 mM mannitol. B, Plants were incubated at 22°C (control) or 4°C under a 12/12 hr photoperiod. Representative leaves are shown.

Supplemental Table SI. List of primers used in PCR and RT-PCR reactions.
