

ESM Fig. 2: Metabolic variables of mice with pancreatic TCPTP deletion. Glucose (a) and glucagon (b) concentrations in serum of fed and fasted control (Con) and panc-TCPTP KO mice fed chow (Con, n=4 and KO, n=8) and HFD (Con, n=6 and KO, n=11) at 55 weeks of age. * $p < 0.05$ Con vs KO mice fed HFD.
