

Supplementary information, Figure S8. IL-2 does not have a major effect on the frequency of GM-CSF⁺ CD4⁺ cells. Splenocytes were obtained from MOG₃₅₋₅₅/CFA-immunized WT mice before disease onset and challenged with MOG₃₅₋₅₅ (20 µg/ml) in the absence or presence of IL-2 for 48 h. The frequencies of GM-CSF⁺ and IL-17⁺ cells among CD4⁺CD44^{hi} T cells were measured by flow cytometry.
