

SUPPLEMENTARY TABLE S1: GO and GSTF binding enrichments for transcripts changing in the slow growth signature

The slow growth signature with gene expression changes corresponding to the slowest growing strain was used for enrichment analysis. Transcripts were used based on a fold-change cutoff of 1.7 and a p-value cutoff of 0.05, resulting in 439 transcripts with increased expression and 207 transcripts with decreased expression. GO terms and GSTF enrichments were considered significant with a p-value less than 0.01 (after Bonferroni correction). Terms also found in the ESR have been marked by an asterix (*). P-value = 0 are below machine precision.

Transcripts with increased expression:
