

Table S1 Number of genes meeting various read-count thresholds

Reads	Genes	Sex-biased (female, male)	Population-biased (Africa, Europe)
12	12,547	2,308 (905, 1,403)	2,474 (1,230, 1,244)
20	12,001	2,272 (898, 1,374)	2,459 (1,222, 1,237)
50	10,793	2,098 (858, 1,240)	2,436 (1,206, 1,230)
100	9,785	1,871 (798, 1,073)	2,382 (1,182, 1,200)
150	9,272	1,785 (772, 1,013)	2,340 (1,164, 1,176)

Shown is the total number of genes meeting each read-count threshold, as well as the number of significant sex- and population-biased genes at a FDR of 5%.
