

Table S1: Characteristics of Selected Cognitive Tests

Test	Test Duration	No. of Questions	Test Characteristics	No. of Studies	No. of Patients	References
Montreal Cognitive Assessment (MoCA)	10 mins	30	Using a cut-point of 25/26, sensitivity is 80-100% and specificity is 50-76% to detect MCI.	2	251	Lee JY. J Geriatr Psychiatry Neurol. 2008; 21:104-110. Markwick A. J Clin Exp Neuropsychol. 2012; 34:750-757.
The Mini-Mental State Exam (MMSE)	7-10 mins	30	Using cut-points of 27 or 28, sensitivity is 45-60% and specificity is 65-90% to detect MCI.	3	1,235	Tariq SH. Am J Geriatr Psychiatry. 2006;14:900-910. Kaufer DI. J Am Med Dir Assoc. 2008; 9:586-593. Saxton J. Postgrad Med. 2009; 121:177-185.
Mini-cog test	≤ 3 mins	4	Using cut-point of 0-2, sensitivity is 39-84% and specificity is 78-88% to detect MCI or dementia.	2	1001	Borson S. Int J Geriatr Psychiatry. 2006; 21:349-355. Holsinger T. JAGS. 2012; 60:1027-1036.
