

SUPPLEMENTARY FIG. S3. MSRA-1 modulates A β aggregation *in vivo*. (A) BSB staining of 1-day-old and 3-day-old A β worms (*top image*) and A β ; *msra-1* worms (*bottom image*). The *arrows* show BSB-positive areas that are increased in the absence of *msra-1*. (B) The graph shows quantification of the BSB positive areas in the head of the animal. $n \geq 30$ *** $p \leq 0.0001$. Student's *t*-test was used for statistical analysis.
