

Figure S9. Co-immunoprecipitation of BiFC complexes of PP2Aα-YC and YN-B55β1 or YN-B55δ in the presence of 6myc-PP2A/Aα. Lysates of NIH3T3 cells co-transfected with equal amounts of BiFC expression constructs encoding PP2Aα-YC and YN-B55β1 or YN-B55δ with or without pCA2-6myc-PP2A/Aα were immunoprecipitated by anti-HA antibody and the immunocomplexes were analyzed by SDS-PAGE and Western blotting by specific anti-GFP, anti-HA, and anti-Myc tag antibodies.
