

Table S12. Possible genotypes of loci *PITG_11126*, *PUA*, β -tubulin and *TRP1* of putative parents for the GDT isolates when assuming that lineage US-22 is one of the parental genotypes for these isolates. In red we show the alleles that the alternate parent or parents must possess to give rise to the genotypic profiles observed in the NYS-2010/11 isolates when assuming that lineage US-22 is one of the parental genotypes for these isolates.

Polymorphic Alleles site present	<i>PITG_11126</i> (776 bp)							<i>PUA</i> (609 bp)								β -tubulin (883 bp)				<i>TRP1</i> (824 bp)
