

(A) Representative Annexin V flow cytometry plots of chemotherapy-resistant primary cell lines treated using HO-3867, STATTIC, Cisplatin (CP), and Taxol versus untreated controls. (B) Quantification of Annexin V-positive events from flow cytometric data. (C) Representative western blots showing increased cleaved caspase 7 and cleaved PARP expression in HO-3867-treated primary cell lines versus non-treated controls.
