

# Supplementary Figure 6

**A**

**B**

**Supplementary Figure 6:** (A) Epididymal fat pads were dissected from male Balb/c mice at the indicated times after tunicamycin injection. The tissues were lysed and equal amounts of protein resolved by SDS-PAGE followed by immunoblotting using antibodies recognizing the indicated proteins. (B) The intensities of the perilipin bands were quantified by densitometry. Graph represents mean±SD of values obtained at 24 h post injection, n=4.
