Supplementary Figure 7: Male Balb/c mice were injected intraperitoneally with either control buffer or tunicamycin. After 24 h, the liver and kidney were fixed and stained with Oil Red O and hematoxylin to visualize lipids (red) and nuclei (blue) respectively. (A) Control liver, (B) Tunicamycin treated liver, (C) Control kidney, (D) Tunicamycin treated kidney. Objective = 20x, n=5.
