

Figure S6.

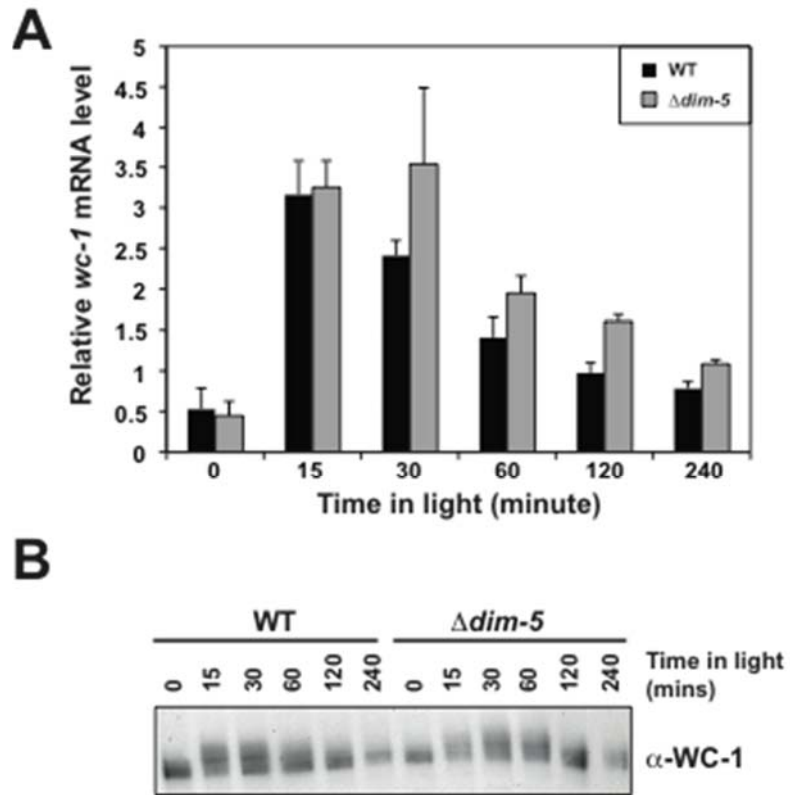

Figure S6 DIM-5 is not required for *wc-1* expression. (A) WT (FGSC2489) and $\Delta dim-5$ (XB18-11) strains were grown in the dark then transferred to saturating light and harvested at the indicated time. RNA was extracted and transcript abundance was measured by RT-PCR with oligonucleotides specific for *wc-1*. (B) Total soluble protein was extracted from the samples in (A) then blotted for WC-1.
