

SUPPLEMENTARY FIG. S2. ICAM-1 expression of TNF α -treated ECs and EOCs measured by flow cytometry. Each individual donor showed the expected dose-dependent upregulation of ICAM-1 induced by TNF α treatment. Large differences between donors were observed, with some cells being much more responsive to TNF α treatment. ECs, endothelial cells; EOCs, endothelial outgrowth cells; ICAM-1, intercellular adhesion molecule 1; TNF α , tumor necrosis factor α .
