Table 2A: Significant differences in antistaphylococcal responses between Algerian controls and patients with joint, respiratory or skin infections

	Algerian joint vs control			Algerian respiratory vs control			Algerian skin vs control		
	IgGt	IgG1	IgG4	IgGt	IgG1	IgG4	IgGt	IgG1	IgG4
LukE							*0,001* (b)		
LukS	*0,001* (a)						*0,001* (c)		

Values shown are P values, cutoff was at p < 0,0013

Bold indicates healthy controls have significantly higher MFI values than infected patients

Italic indicates infected patients have significantly higher MFI values than healthy controls
