

Supplementary figure 1.

Supplementary figure 1. There was no difference in frequency of neutrophils in blood, 6 days after i.v. inoculation. The frequency of neutrophils in blood was measured after 8 weeks on different diets and 6 days after i.v. inoculation. Data was analyzed using one-way ANOVA. Data are shown as means \pm SEM. $n=9$ mice per group. Experimental groups: Low fat diet (LFD), saturated high fat diet (HFD/S), and polyunsaturated high fat diet (HFD/P).
