

SUPPLEMENTAL DATA

Supplemental Figure 1. Cytotoxicity of lipofectamine, MnO, and GNP alone. Cells were treated with either MnO nanoparticles (0.025 $\mu\text{g}/\mu\text{L}$) or GNP (5% v/v of 3X stock), or untreated (NTC) +/- Lipofectamine as controls for the data presented in Figure 10. The MTT assay was performed exactly as that represented in Figure 10, and cell viability was again calculated at a percent of the control (NTC - Lipofectamine).
