Figure S2. Effect of sugar on TNBC cell proliferation. Breast cancer cells (3000 cells) were plated in soft agar with DMEM containing high glucose (3.15 g/L) or low glucose (1g/L), or in DMEM media containing galactose (3.15g/L) without glucose. After 4 weeks, cell colonies were stained and counted. Each data point represents the mean \pm S.D. (n = 3). *, p<0.05
