

Listing S1. Groovy script example for image stack processing in IQM

```
import at.mug.iqm.commons.gui.*;
import at.mug.iqm.commons.io.*;
import at.mug.iqm.api.Application as app;
import at.mug.iqm.api.operator.WorkPackage as WorkPackage;

// process all items virtually, declare commonly used variables
app.setVirtual(true)
tf = app.getTaskFactory()
tank = app.getTank();

// 01. locate the files
oid = new OpenImageDialog();
files = oid.showDialog();
if (files == null) return;

// 02. load the files to the tank to the next available index
tank.loadImagesFromHD(files, true)

// 03. print all loaded files to the console
println files

// get the source images from the tank
srcImgs = tank.getTankDataAt(tank.getCurrIndex())

// 04. smooth all images using 2D Gaussian filter
wp = WorkPackage.create("IqmOpSmooth")
params = wp.getParameters()
wp.setSources(srcImgs) // get last loaded index
// override the default parameters
params.setParameter("Method", 1) // Gaussian
params.setParameter("KernelSize", 7) // 7x7 kernel
```

```

// process the stack in serial manner
task = tf.createSerialTask(wp, app.isVirtual())
task.execute()
// wait for the multi-dimensional result (List<List<IqmDataBox>>)
result = task.get();

// add images (index 0) to the tank
smoothImg = result.get(0)
tank.addNewItem(smoothImg)

// 05. detect edges using Difference of Gaussians
wp = WorkPackage.create("IqmOpEdge")
params = wp.getParameters()
wp.setSources(smoothImg) // set the items to process
params.setParameter("Method", 7) // DoG option
params.setParameter("KernelSize1", 3) // 3x3 kernel
params.setParameter("KernelSize2", 5) // 5x5 kernel
params.setParameter("ResultOption", 1) // normalize

// process the stack in parallel using 4 threads
task = tf.createParallelTask(wp, app.isVirtual(), 4)
task.execute()
// wait for the multi-dimensional result (List<List<IqmDataBox>>)
result = task.get()

// add images (index 0) to the tank
edgeImg = result.get(0)
tank.addNewItem(edgeImg)

// 06. store images as sequence to custom location
sisd = new SaveImageSequenceDialog()
target = sisd.showDialog()

```

```
if (target == null) return;

// 07. write the image files
ifw = new ImageFileWriter(target, edgeImgs, "PNG", "png", \
    →ImageFileWriter.MODE_SEQUENCE)
ifw.writeSequence()
println "Image_sequence_saved_to[" << target << "]."
return;
```
