

Supplementary figure 2

Short-term clonal expansion of K-ras^{G12D} mutated Lgr5^{hi} cells

Supplementary figure 2: Short-term clonal expansion of K-ras^{G12D} mutated Lgr5^{hi} cells

A) Representation of the relative abundance (%) of clones scored for total clone size and the number of Lgr5^{hi} cells after 48hr. Total clone size was scored as the total number of cells within a given clone, while the stem cell content was determined as the number of Lgr5^{hi} cells within that clone. Left: WT clones, right: K-ras^{G12D} activated clones. **B)** Like A, but after 72hrs of tracing.
