

Figure S4 The effects of WRKY18, WRKY40 and WRKY60 on *Ipt* promoter activity.

Fold induction of *Ipt* promoter-driven luminescence in the presence of WRKY18, WRKY40 and WRKY60 transcription factor expression plasmids in the protoplast transactivation system. The relative luminescence induced by the *Ipt* promoter in protoplasts without transfection of any of the transcription factor expression plasmids was set to 1. Bars show mean values (\pm SD) of three independent experiments.
