

Supplemental Table 2. Culture media used for isolation of intestinal microbiota in Normal rats

Bacteria identified	Cultured media
<i>Lactobacillus johnsonii</i>	GAM Agar
<i>Lactobacillus reuteri</i>	GAM Agar
<i>Lactobacillus gallinarum</i>	GAM Agar
<i>Lactobacillus johnsonii</i>	GAM Agar
<i>Lactobacillus johnsonii</i>	GAM Agar
<i>Lactobacillus johnsonii</i>	Blood Agar
<i>Escherichia coli</i>	MacConkey Agar
<i>Enterococcus faecalis</i>	Blood Agar
Non-identified bacterium <i>Lactobacillus</i> sp.	Blood Agar
<i>Lactobacillus johnsonii</i>	Blood Agar

Ten bacterial strains cultured on MacConkey agar plate, BHI agar supplemented with 7% horse blood and GAM agar medium by aerobic or anaerobic culture were identified by 16S rRNA sequencing in Normal rats.
