

Table 4, online. Results of bootstrapping analyses for effects of perceived discrimination on CESD scores among non-Hispanic white young adults from the Princeton School District (PSD) Study (N=296)

	Effect Estimate	95% CI	
Parent education direct effect	-1.30	-2.50	-0.10
Discrimination mediated	-0.42	-0.89	-0.14
Proportion of parent education indirect effect accounted for by discrimination		32.3	
Model adjusted R ²	0.17		

Model adjusts for sex, household income, baseline age, and length of follow up.
