

1 **Figure S1.** Glycoside hydrolyases (GH) content in *Streptomyces* and *Mycobacteria*.
 2 The boxes represent the 25-75 percentiles; the bars represent the 2.5-97.5
 3 percentiles.

4
 5

6 **Table S1.** Glycoside hydrolases (GHs) in sequenced bacterial genomes. Pfam
 7 accession numbers, substrate specificity of characterized enzymes as stated in the
 8 CAZy database, frequency of genomes with specific GH (F), average number of genes
 9 for the GH in genomes having the GH (A), and redundancy index (σ).

GH family	Pfam	Substrate	F	A	Redundancy (σ)
GH1	PF00232	Oligosaccharides	0.53	3.1	0.78
