Figure S3 SNP sharing between chosen accessions and CS3227. Note SNP numbers are not corrected for the unsequenced portion of the compared genomes. All SNP data downloaded from 1001genomes.org on August 2013.

   A. SNP sharing between CS3227 and accessions An-1, Er-0, Est, Gr-1, La-0, Ler-0 and Li-2:1 used by George Redeí, for the interval 10-20 Mbp of chromosome 1.

   B. SNP sharing between CS3227 and Est accessions (from Salk, CS 67485, or MPI, CS22683), for, after resequencing as PCR-free DNA Truseq libraries. Note that SNP numbers are not corrected for the unmapped portion of the compared genomes.
