

Fig. S5

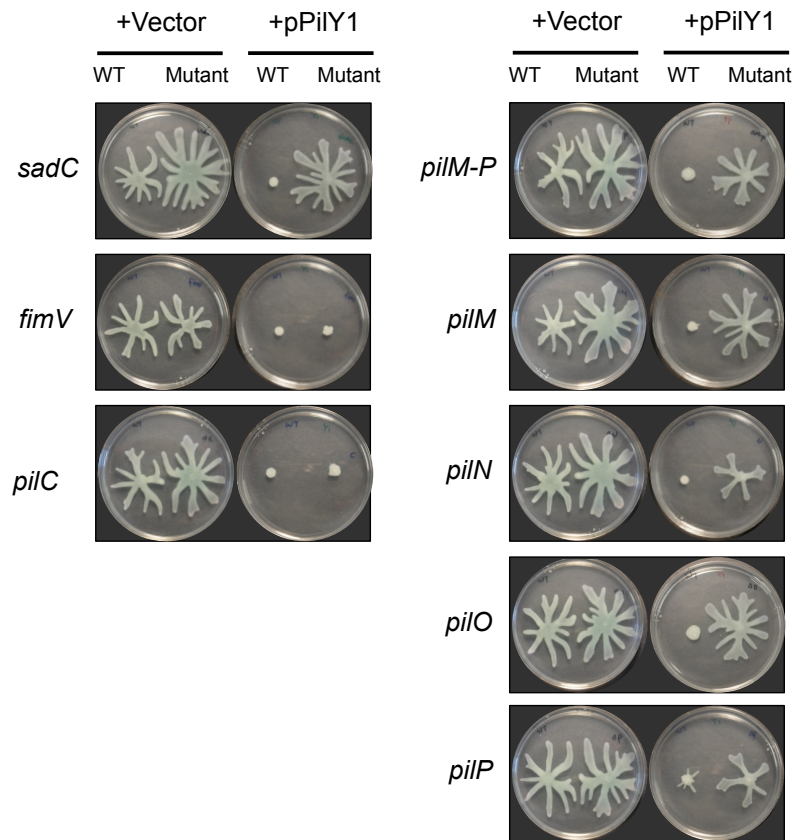

Fig. S5. Swarms of the WT, the $\Delta sadC$, $\Delta fimV$, $\Delta pilC$, $\Delta pilM$, $\Delta pilN$, $\Delta pilO$ and $\Delta pilP$ mutant strains carrying either empty vector or pPilY1 plasmid. Swarming assays are performed as described in the text of the manuscript and in the Supplementary Materials. WT (left) and a mutant strain (right) are spotted on the same plate for direct comparison. All plates contained 0.2% arabinose.
