

Supporting figure S5 The relative expression of the A) *SICYP707A2* and B) *SICYP707A4* ABA catabolic genes. Values shown are the geometric means of three biological replicates \pm SE. *Tip41like* and *PP2ACs* were used as housekeeping genes. All values are expressed in arbitrary units relative to the expression of the corresponding gene in the 120h-Dark¹ sample.
