

Figure e-3. Effects of achieved diastolic blood pressure (A: 1-24 hours, B: 2-7 days) on score of the modified Rankin Scale at 90 days

DBP indicates diastolic blood pressure; 95% CI, 95% confidence interval. Odds ratios and 95% CIs (shaded areas) were shown according to achieved post-randomization diastolic blood pressure after adjustment for age, sex, region, time from onset to randomization, National Institutes of Health Stroke Scale (NIHSS) score, volume and location of hematoma, intraventricular extension and randomized treatment. The reference was achieved post-randomization diastolic blood pressure of 70 mmHg.
