

Figure S1: The effects of EMT-relevant transcription factors on NOVA1 protein expression. Western blotting of NOVA1 in PC-3E cells transduced by SNAI1-ER, ZEB1, or TWIST2. SNAI1-ER-inducible PC-3E cell line was treated with 4-Hydroxytamoxifen (4-OHT) for the indicated period of time. β -actin was used as loading control. EV, empty vector.
