

Supplemental Figure S1. Protein levels of Pri1 and Pol1 protein remain unchanged in *pri2(C336A,C417A,C474A)* mutants.

Protein extracts from log-phase cells were resolved by SDS-PAGE and probed for the epitope-tagged proteins and G6PDH as a loading control. (A) Both wild-type (WT) and *pri2(C336A,C417A,C474A)* contained PRI1-MYC and PRI2-HA at their respective chromosomal loci. (B) Both wild-type (WT) and *pri2(C336A,C417A,C474A)* contained POL1-HA (171 kD) and PRI2-HA (67 kD) at their respective chromosomal loci.
