R=A or G
W=A or T
Y=C or T

Supplementary information, Figure S19 A comparison of *p53* responsive elements in human *RAD51*, *RAD52* and *LIG4* promoters with the known *p53*-repressive or -activating consensus sequences. The black and red arrows correspond to the orientations of the quarter sites. R=A or G, W=A or T, Y=C or T. The mismatch nucleotide is red. The positions of the *p53* responsive elements in the promoters are indicated.
